

Fisher Textiles to Launch New Products at PRINTING United Expo 2024

Matthews, NC (September 6, 2024) - Fisher Textiles is excited to introduce several new products at the PRINTING United Expo, taking place from September 10-12 in Las Vegas.

GF8861 Silver Back is a lighter-weight grey-back fabric designed for tension displays and hanging signs. This innovative fabric features a distinctive knit with white yarns on the front and a blend of white and black yarns on the back, creating a silver grey-back effect. It acts as a built-in liner for frontlit framing systems and pillowcase applications. Made from 100% polyester without a back coating, it retains its natural stretch while offering improved blackout properties. The GF8861 weighs 9.5 oz/yd², is available in 126-inch wide rolls, and is flame retardant (NFPA 701 and Cal 19). Additionally, we offer a treated version, DD8061 Silver Back, suitable for direct and UV-curable printing.

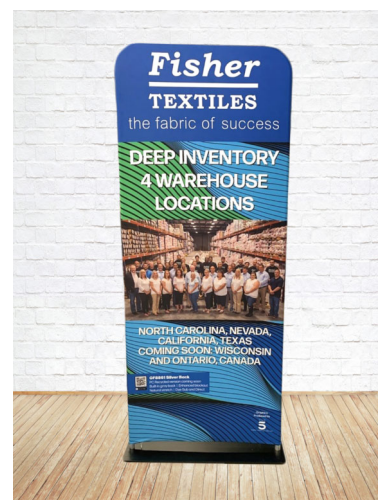

ET8301 Prime Backlit is crafted from 100% post-consumer recycled polyester and is optimized for both direct printing and dye sublimation transfer printing. With each linear yard containing 39 recycled 500ml water bottles, this fabric is made entirely from stretch polyester yarns. It delivers vibrant colors and a luminous glow, while offering excellent stretch and recovery for efficient shipping and quick installation in aluminum framing systems. It is wrinkle and craze resistant, weighs 5.9 oz/yd², and measures 125 inches in width. Additionally, it is flame retardant (NFPA 701). Notable for its exceptional durability and tear strength, ET8301 Prime Backlit ensures long-lasting performance.

ET8051 Super Sonic Backlit continues our commitment to sustainability with its 100% post-consumer recycled textured knit composition. This upgraded version of ET8050 Super Sonic offers superior craze resistance and foldability while maintaining the same stretch, white point, weight, and width as its predecessor. Its outstanding print vibrancy, particularly when backlit, makes it a standout choice.

GF7429 BA Knit is a cost-effective, 100% polyester super wide fabric, stocked 197-inches wide. It is ideal for a variety of applications, including walls and ceilings, exhibit graphics, geometric/stretch displays, and photographic backdrops. Weighing 6.2 oz/yd² and flame retardant (NFPA 701), this fabric provides versatility and durability.

DD7848 EZ Stretch Premium is our treated version of GF9048 EZ Stretch, designed specifically for direct printing. Made from 100% polyester, this fabric features a unique knitting structure that provides stretch without the need for Spandex. This fabric is completely wrinkle free, provides stretch in both directions, has good opacity and excellent color definition. Weighing 7.4 oz/yd² and flame retardant (NFPA 701), it is ideal for exhibit graphics, geometric/stretch displays, home furnishings, photographic backdrops, silicone edge graphics, and tension displays.
